Skype ID: ashfaq3235
Address: Street No. 3, Latif Bagh, Mian Channu, Pakistan

EDUCATION

- BACHELOR OF MECHANICAL TECHNOLOGY (2013-2017)
Global University, Lahore
- DAE IN MECHANICAL TECHNOLOGY (2007-2010)
PBTE, Lahore
- MATRICULATION (SCIENCE) (2004-2008)
BISE MULTAN, Multan
- AUTOCAD CERTIFICATION (2008)
PBTE, Lahore

ABOUT ME

Control Room Engineer with 14+ years of experience in power generation, specializing in CCR and BOP operations. Skilled in operating and optimizing turbines, boilers, water treatment, and distribution systems. Strong in troubleshooting, safety compliance, and performance monitoring. Proven ability to collaborate with cross-functional teams, ensuring reliable, efficient, and safe plant operations.

TOTAL EXPERIENCE: 14+ YEARS

CONTROL ROOM ENGINEER (FEB 2022 - PRESENT)

Chiniot Power Limited (Coal and Bagasse Based)

Plant Overview:

Chiniot Power Ltd is a 62.4 MW Cogeneration IPP Power Plant operating with two 155 TPH solid fuel-fired (Coal & Bagasse) boilers and two 31.2 MW HTC Condensing & Extraction Type Steam Turbines.

Key Responsibilities:

- Operate and monitor all plant systems to ensure safe, smooth, and efficient plant startup and shutdown procedures per company policies.
- Manage load shifting and turbine operation during home load conditions, grid disturbances, or varying process demands.
- Oversee the safe operation of MOP, lube oil systems, jacking oil systems, online tap changers, and AVR.
- Operate fuel handling systems, auxiliary and main cooling water systems, and cooling tower fans.
- Maintain process steam parameters according to operational requirements.
- Monitor system parameters and maintain detailed operational log sheets.
- Conduct routine plant checks and complete scheduled call-up tasks.
- Assist the Shift Manager in ensuring uninterrupted and optimal plant performance.
- Operate and perform routine checks on:
 - 2 × 31.2 MW Steam Turbines (Hangzhou, China)
 - 2 × 1.25 MW Emergency Diesel Generators (EDGs)
 - Instrument and service air compressors
 - Cooling water pumps
 - Chemical dosing systems and other balance-of-plant equipment
- Manage bagasse feeding and control through the fuel handling system.
- Operate electrical systems at 132KV, 11KV, and 400V.
- Identify, troubleshoot, and report plant abnormalities and equipment faults.
- Authorized LOTO (Lockout/Tagout) personnel for isolation, de-isolation, and safety verification.
- Active member of the Emergency Response Team.

PERSONAL INFO

- **Passport No:** EE1849742
- **CNIC No.:** 36501-7324974-3
- **Date of Birth:** 11-01-1989
- **Marital Status:** Married

KEY SKILLS

- Proficient in Microsoft Windows and Microsoft Word
- Office Management Course (OMC)
- Skilled in basic Web Surfing and Internet Usage
- AutoCAD (Certified)

LANGUAGE

- English
- Urdu

- Attend monthly safety training and participate in safety drills and audits.

CONTROL ROOM OPERATOR (DEC 2020 - FEB 2022)

Chanar Energy Limited

Plant Overview:

The facility includes a 1 × 115 TPH Traveling Grate High-Pressure Boiler (110 Bar, 540°C), a 22 MW HTC Condensing/Extraction Steam Turbine, a 132KV AIS Grid Station, and a 40 TPH RO Plant.

Key Responsibilities:

- Operated the 22 MW Steam Turbine, cooling towers, and all associated auxiliary equipment within defined operational parameters, ensuring safety and efficiency.
- Performed plant startup and shutdown procedures and managed routine operations by promptly responding to control alarms and system indications.
- Participated in troubleshooting and resolving operational issues during the shift to minimize downtime.
- Followed instructions from the Shift In-Charge and immediately reported any abnormal conditions or system irregularities.
- Ensured continuous and stable power generation by maintaining voltage, frequency, and power factor within acceptable limits, and verified the accuracy of all display meters and control instruments.

CONTROL ROOM OPERATOR (TURBINE) (DEC 2016 - DEC 2020)

JDW-III Co-Gen IPP (O&M by OMS Pvt. Ltd.)

- Operated and monitored steam turbine systems, cooling towers, and auxiliary equipment to ensure safe and efficient plant performance.
- Executed startup and shutdown procedures while promptly responding to control alarms and system deviations.
- Maintained accurate operational logbooks, hourly logs, and data sheets, reporting abnormalities and initiating corrective actions.
- Ensured consistent power generation by maintaining voltage, frequency, and power factor within prescribed limits.
- Conducted turbine protection tests and coordinated routine inspections to prevent equipment failure.
- Supervised and ensured safe operation of the steam turbine's extraction system, maintaining steam parameters in line with process requirements.
- Collaborated with maintenance teams during troubleshooting and repair activities to minimize downtime and enhance operational reliability.

FIELD OPERATOR (TURBINE) (JAN 2015 - DEC 2016)

JDW-III Co-Gen IPP (O&M by OMS Pvt. Ltd.)

Plant Overview:

- Turbine: Hangzhou Steam Turbine – ENK 50/71/48, Impulse and Reaction Type, 26.35 MW (Extraction & Condensing Type)
- Boiler: HMC Bagasse-Based Boiler, 140 TPH, 67 Bar
- Steam Conditions: 64 Bar, 480°C | Extraction: 1.5 Bar, 130°C
- Systems: Water-cooled condenser, cooling tower fans, YOKOGAWA Centum VP 5000 DCS, RO plant, water treatment plant, dense phase ash handling, ash silo, wet scraper, screw compressors, plant neutralization unit, and Caterpillar 250KW Black Start DG set.

TRAININGS AND CERTIFICATIONS

- Lockout Tagout (LOTO)
- Permit to Work (PTW)
- First Aid & Basic Life Support
- Housekeeping & Workplace Hygiene
- Types of Fire Extinguishers
- Personal Protective Equipment (PPE)
- Confined Space Entry Protocols
- Personal & Plant Safety Awareness
- Basic Firefighting & Prevention (Conducted by Rescue 1122)
- 5S Methodology and Implementation in O&M for Workplace Efficiency Training

Key Responsibilities:

- Operated and monitored the 26.35 MW turbine island, cooling towers, and all auxiliary systems within specified safety and efficiency parameters.
- Carried out startup, shutdown, and continuous operations of turbine systems, responding promptly to alarms and DCS indications to maintain stable operations.
- Recorded all operational data in logbooks, hourly logs, and data sheets; identified abnormalities and took corrective actions to prevent equipment tripping or performance decline.
- Ensured consistent electrical generation, maintaining 11KV output, 50Hz frequency, and power factor above 0.8.
- Maintained and monitored safe steam extractions and verified turbine protection systems during regular testing.
- Performed leak checks and coordinated repairs for steam, condensate, cooling water, and compressed air systems; addressed insulation erosion issues in the turbine hall.
- Reported all leaks, spills, or unsafe conditions to the Shift In-Charge for immediate action.
- Followed Shift In-Charge instructions strictly and upheld high standards of workplace cleanliness and safety.
- Participated in troubleshooting activities and supported preventive and corrective maintenance as required.

FIELD OPERATOR (FEB 2012 - DEC 2014)

Saif Power Plant Ltd (Combined Cycle Power Plant – 225 MW)

Key Responsibilities:

- Operated, started up, and shut down the 225 MW Combined Cycle Power Plant safely and efficiently.
- Handled operations of:
 - 2 × 75 MW GE Gas Turbines
 - 1 × 75 MW Steam Turbine
 - 100 TPH Heat Recovery Steam Generators (HRSGs)
 - 100 TPH Auxiliary Boiler
- Managed Natural Gas Pressure Reducing Station (NGPRS) operations.
- Operated two-stage air compressors equipped with air dryers.
- Oversaw the fuel oil pump house and hypochlorite generation plant.
- Managed cooling water intake systems, including trash racks, traveling band filters, and circulating water pumps.
- Operated 1200 kW standby diesel generators during emergency or blackout scenarios.
- Performed routine checks and operations of electrical switchyard equipment including transformers, oil circuit breakers, SF6 breakers, and air quenching circuit breakers.
- Executed equipment isolation and de-isolation (valve and breaker operations), ensuring proper LOTO tagging and adherence to plant safety procedures.
- Provided work and test authorizations to maintenance and operational teams.
- Collected and recorded operational data from control room and auxiliary systems, maintaining accurate logs and computerized records.
